THE MARTINGALE STRATEGY

AND WHY IT DOESNT REALLY WORK

ASSUMPTIONS/CONDITIONS

ASSUMPTIONS/CONDITIONS

1. European Wheel- One Zero (Green)
 - 18/37 or ~48.65% odds of getting one color

ASSUMPTIONS/CONDITIONS

- 1. European Wheel- One Zero (Green)**
 - $18/37$ or $\sim 48.65\%$ odds of getting one color

- 2. Even Bets-** Put in $\$n$, win $\$n * 2$

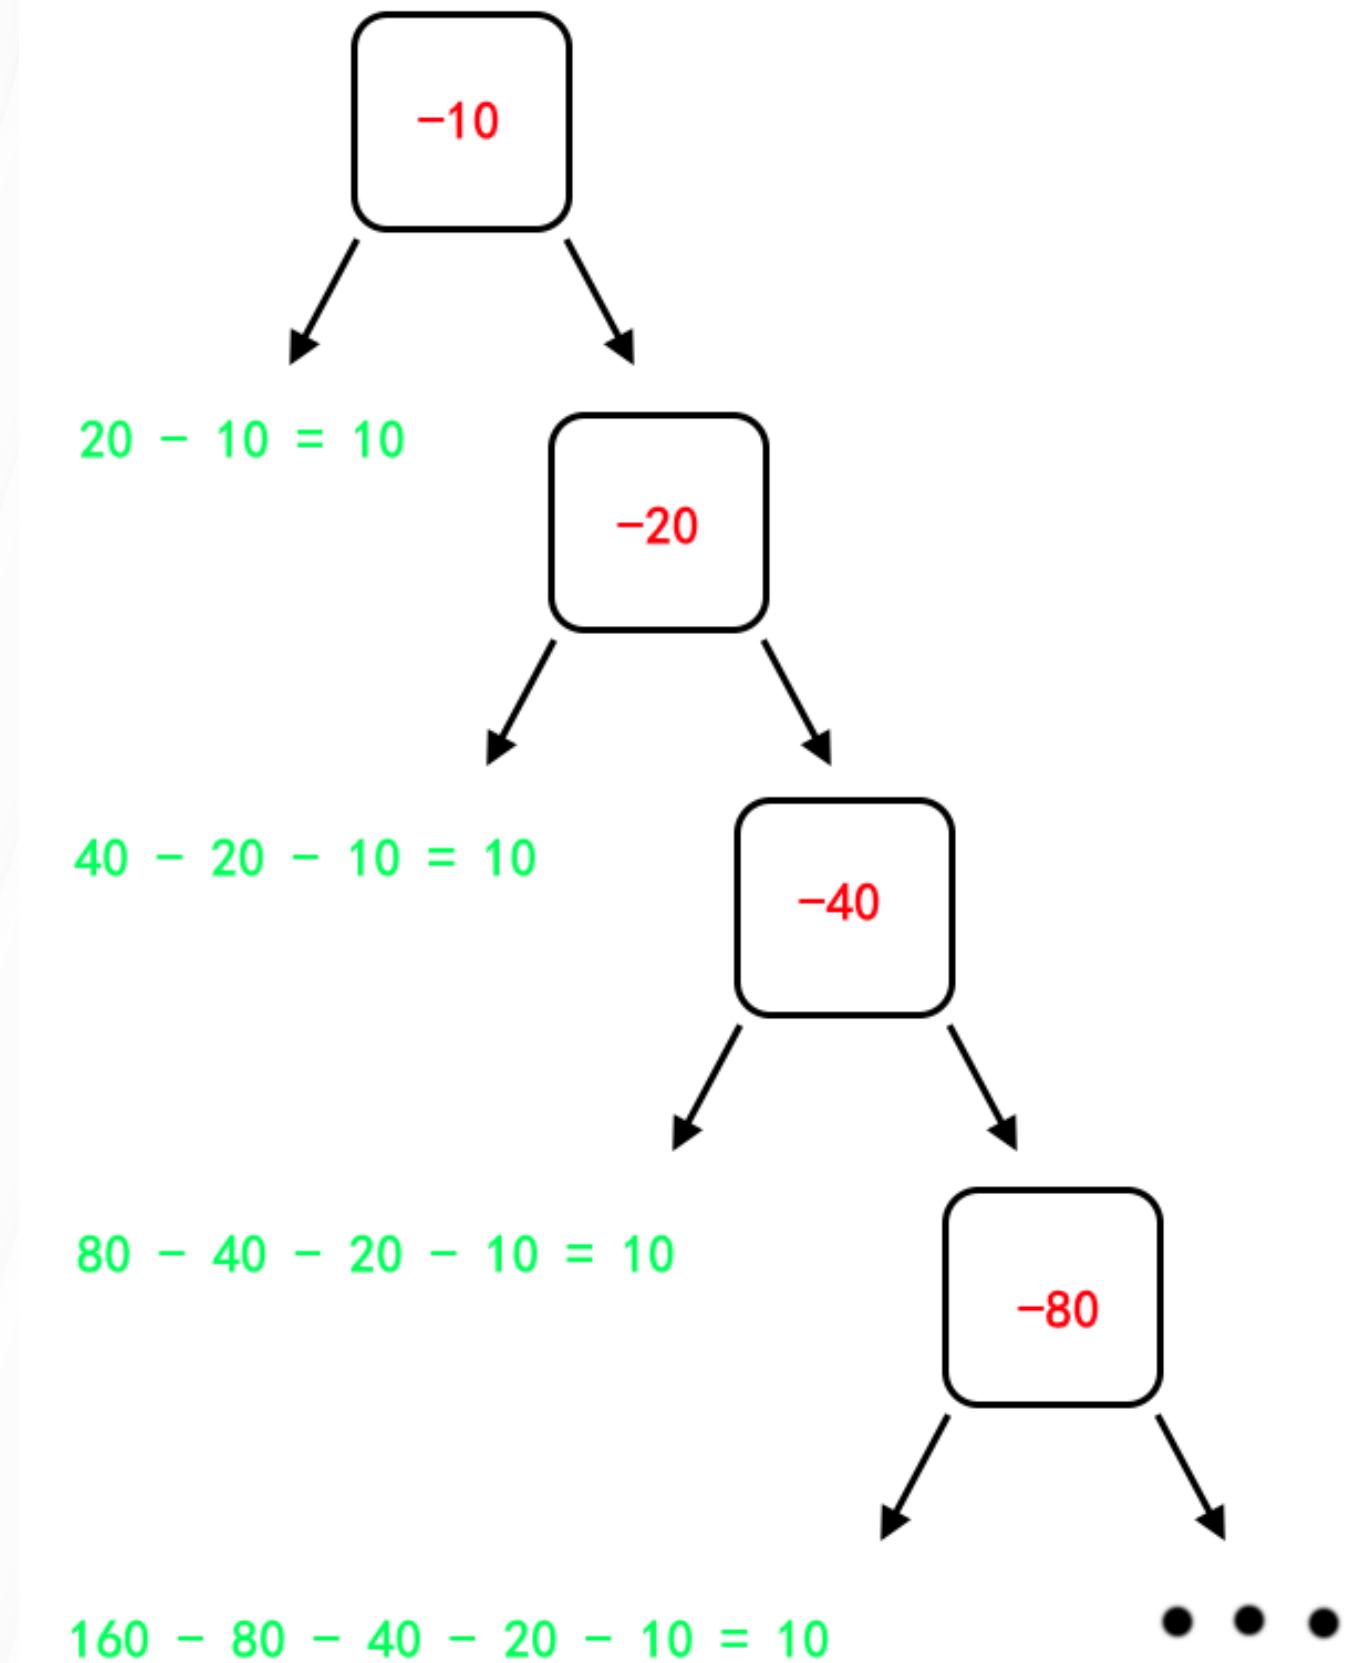

ASSUMPTIONS/CONDITIONS

- 1. European Wheel- One Zero (Green)**
 - $18/37$ or $\sim 48.65\%$ odds of getting one color
- 2. Even Bets-** Put in $\$n$, win $\$n * 2$
- 3. Wheel isn't rigged**

HOW THE MARTINGALE STRATEGY WORKS

- For a singular **session**, bet a starting amount (**s**) on any color
 - ex: \$10 on black
- If you win, congrats, you end your session with \$20 !
 - If you lose, **double down**, and bet another \$20
 - Repeat

THE PROBLEM

Your likelihood of walking away with money for each session is reliant on 2 main factors:

1- How high the betting limit is, or your budget (**B**)

- Doubled bets- your bet grows exponentially upon loss
 - $10 + 20 + 40 + 80 + 160 + 320 + 640 + 1280 = 2550$
 - Probability: $(19/37)^8 \approx 0.48\%$

THE PROBLEM

Your likelihood of walking away with money for each session is reliant on 2 main factors:

2- How low your starting bet (**s**) is, or the min. betting limit

- 2.5, 5, 10, 20, 40, 80, 160, 320, 640, 1280
 - Probability: $(19/37)^{10} \approx 0.13\%$
- However, this means you only earn \$2.5 per session

$$\left\lfloor \log_2 \left(\frac{\text{allotted_budget}}{\text{starting_bet}} + 1 \right) \right\rfloor$$

THE PROBLEM

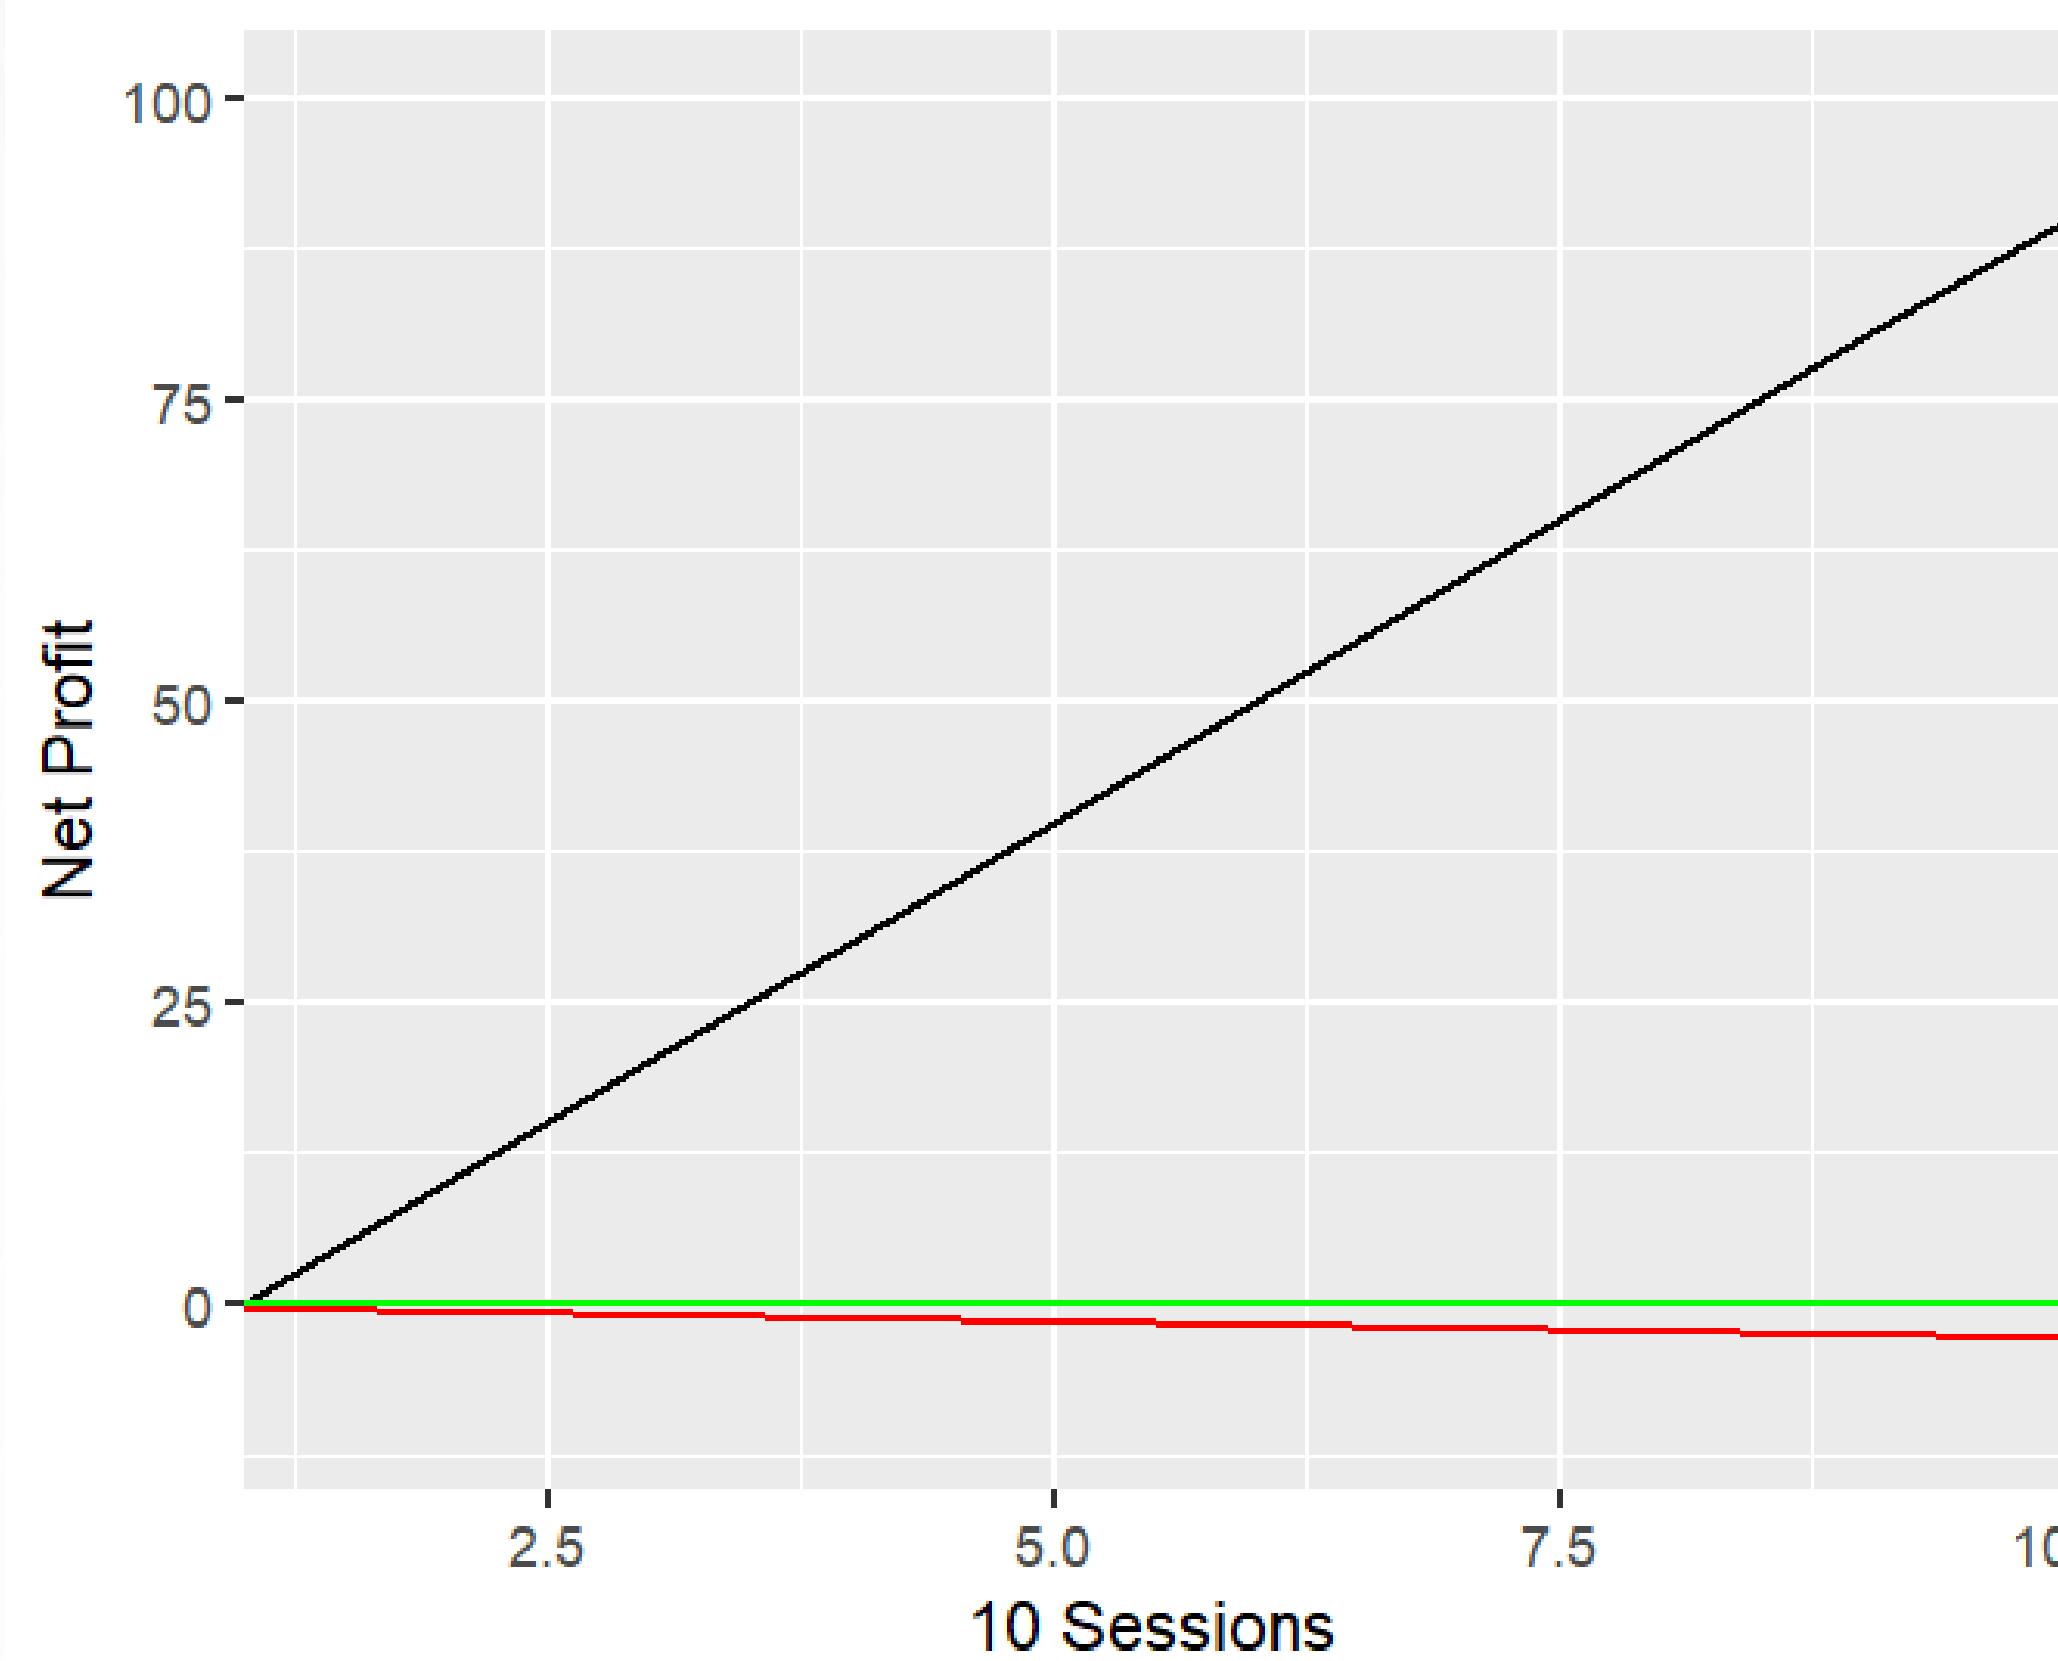

Your likelihood of walking away with money for each session is reliant on 2 main factors:

2- How low your starting bet (**s**) is, or the min. betting limit

- 2.5, 5, 10, 20, 40, 80, 160, 320, 640, 1280
 - Probability: $(19/37)^{10} \approx 0.13\%$
- However, this means you only earn \$2.5 per session

-> **Each session, you either walk away with +s or -B**

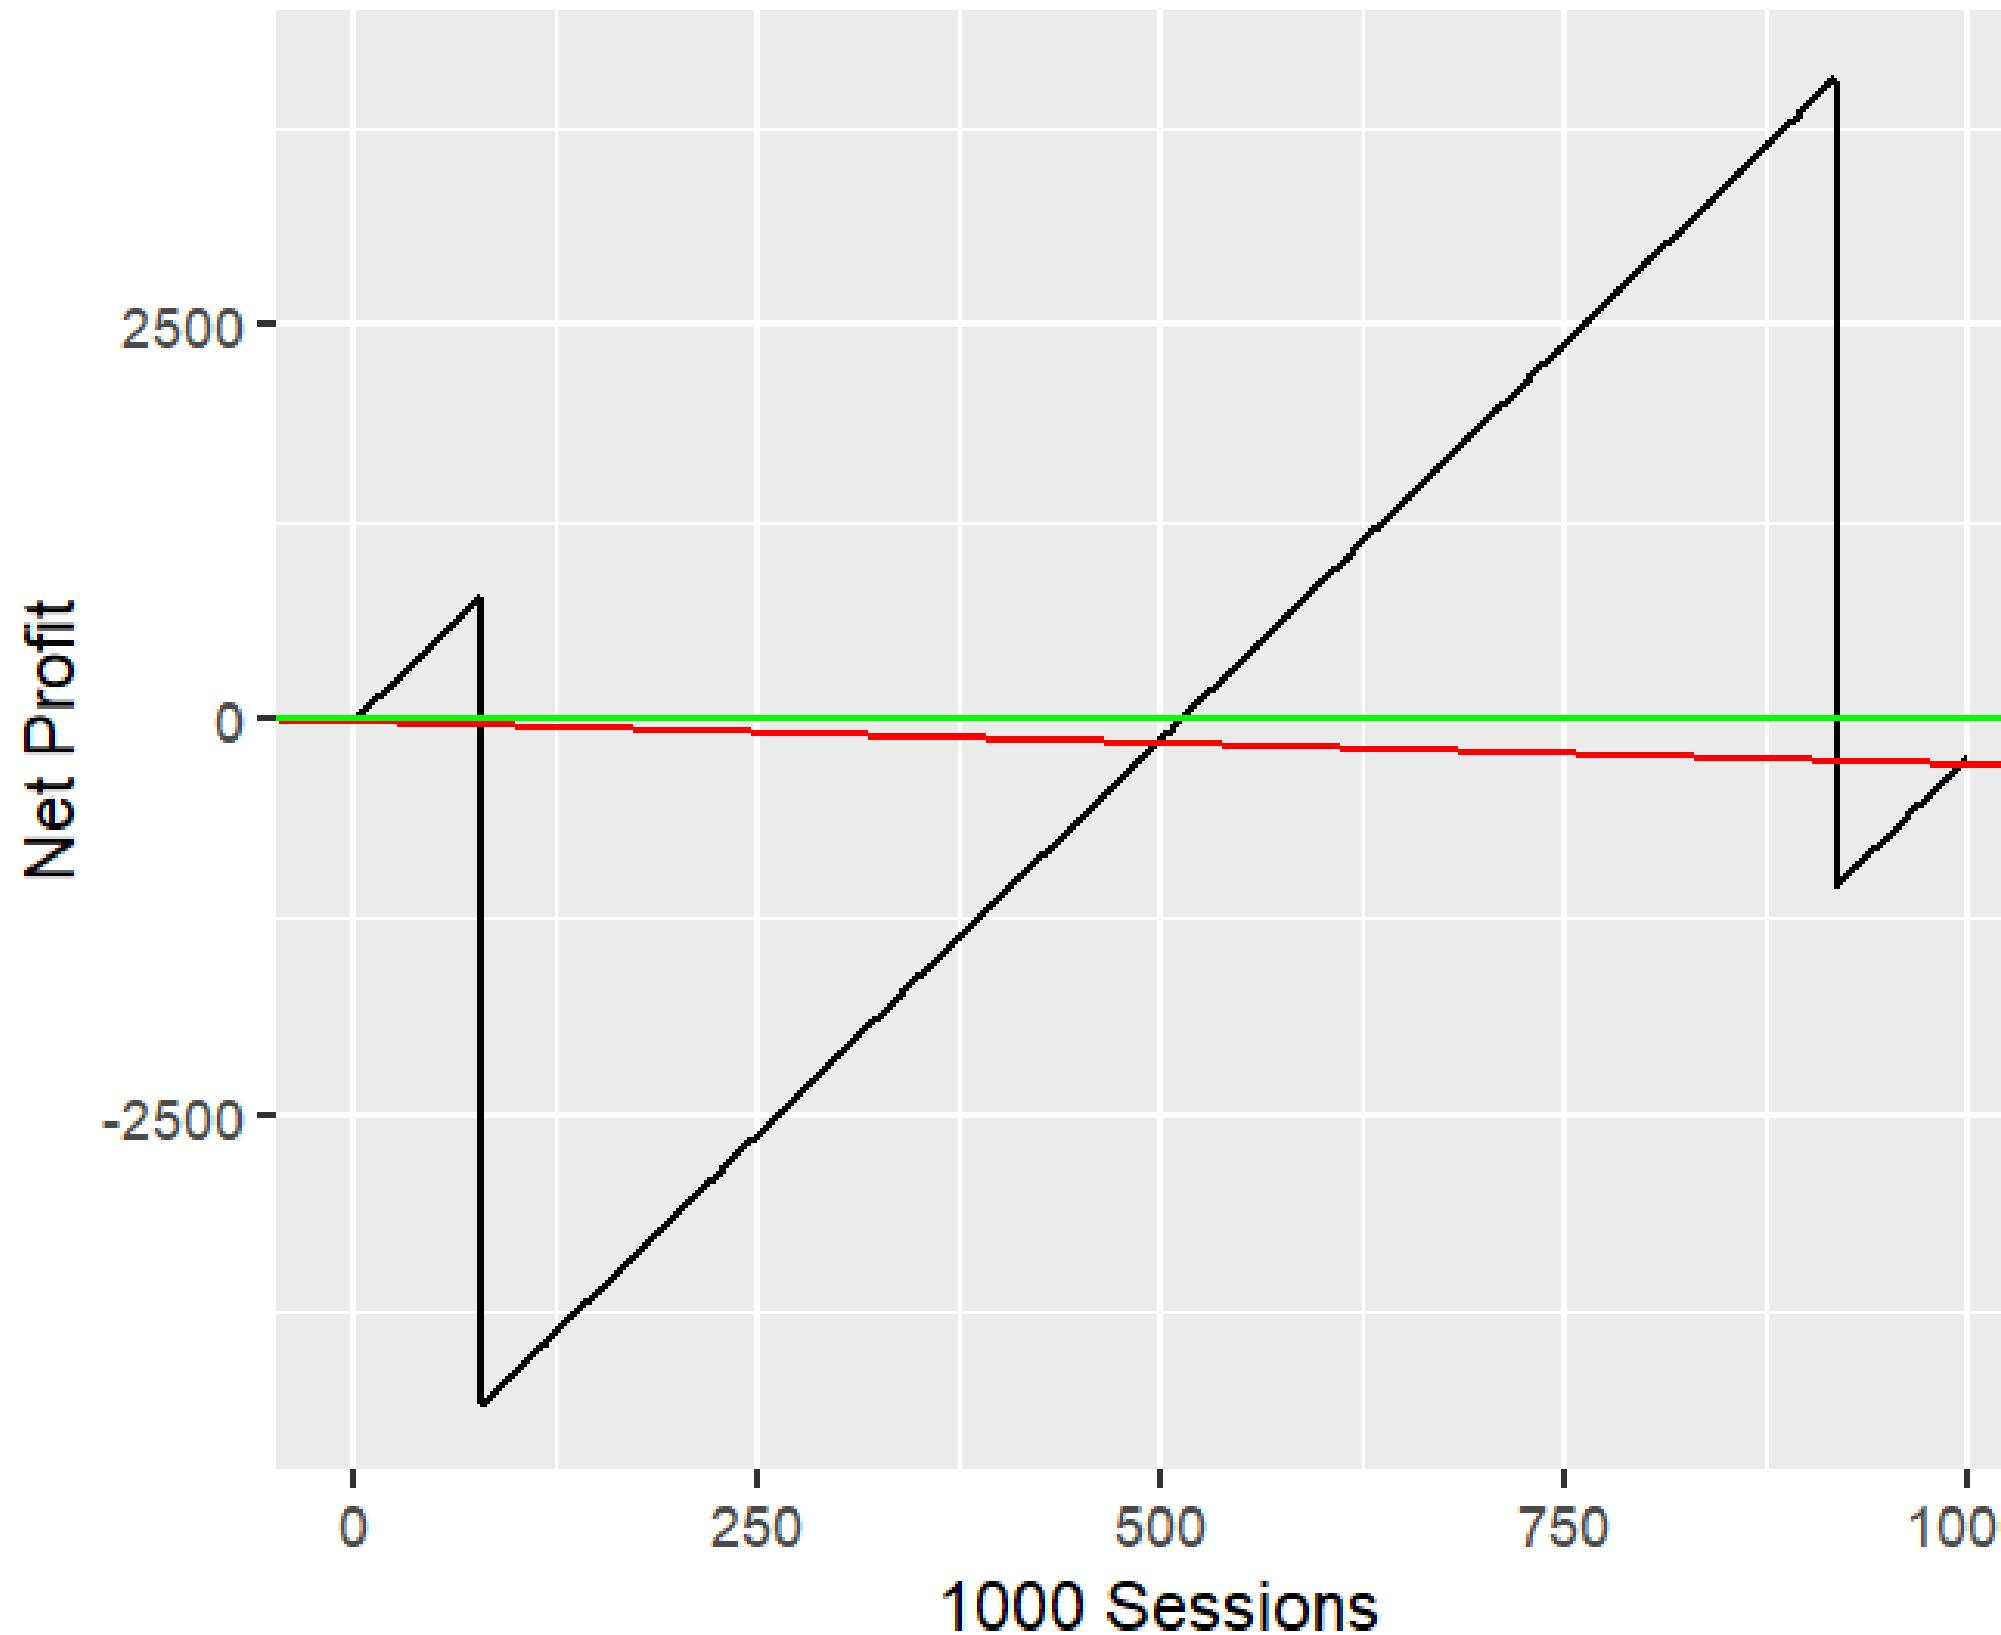

SIMULATION- 10 Sessions

Starting bet: \$10

Max bet/budget: \$10k

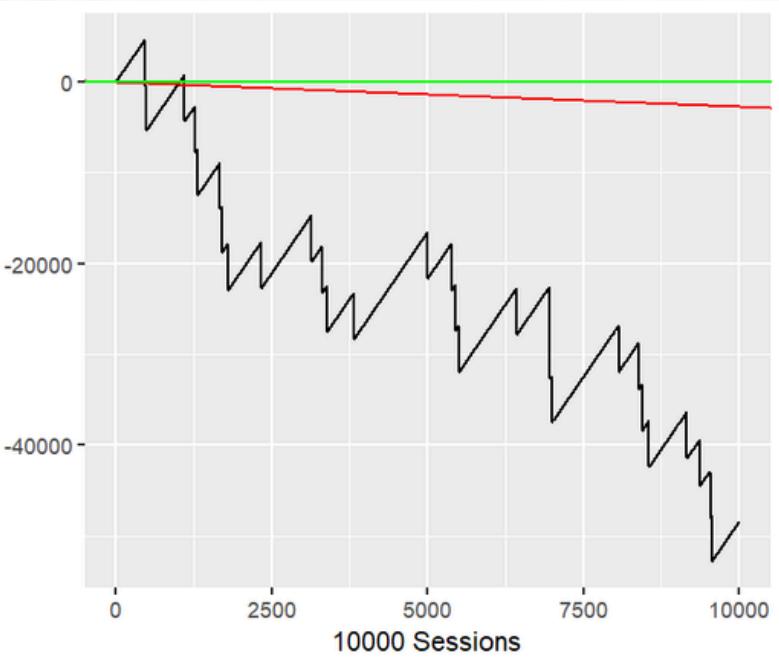

SIMULATION- 1000 Sessions

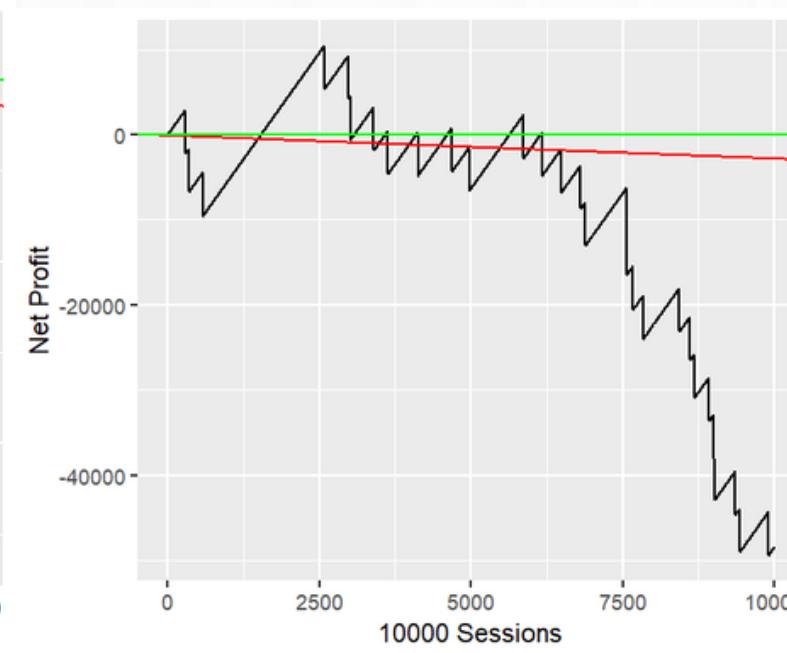

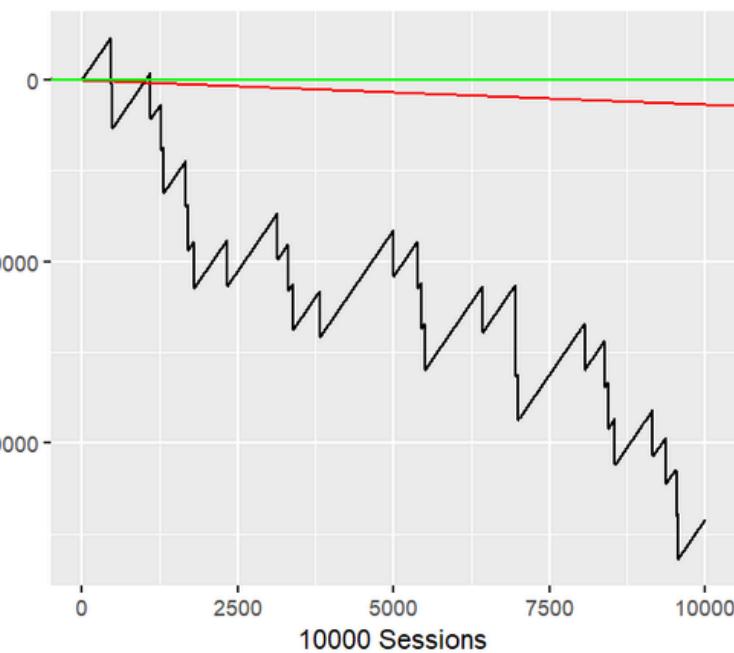

Starting bet: \$10

Max bet/budget: \$10k

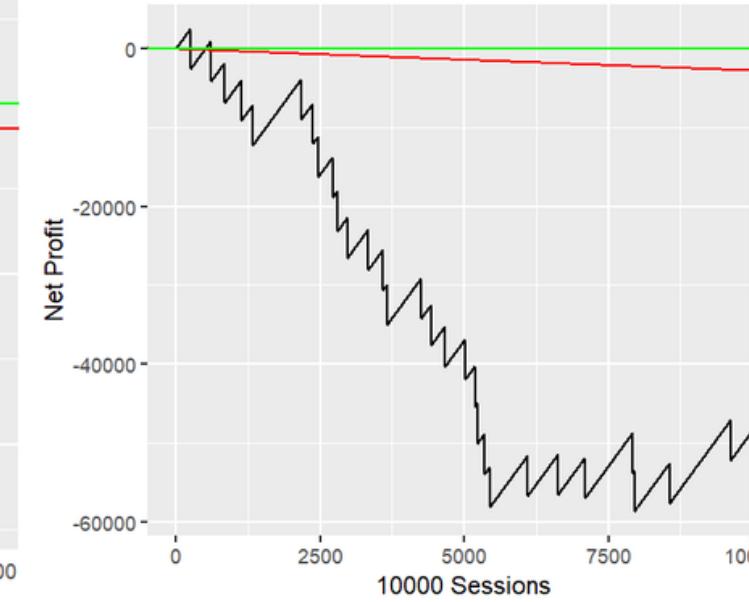

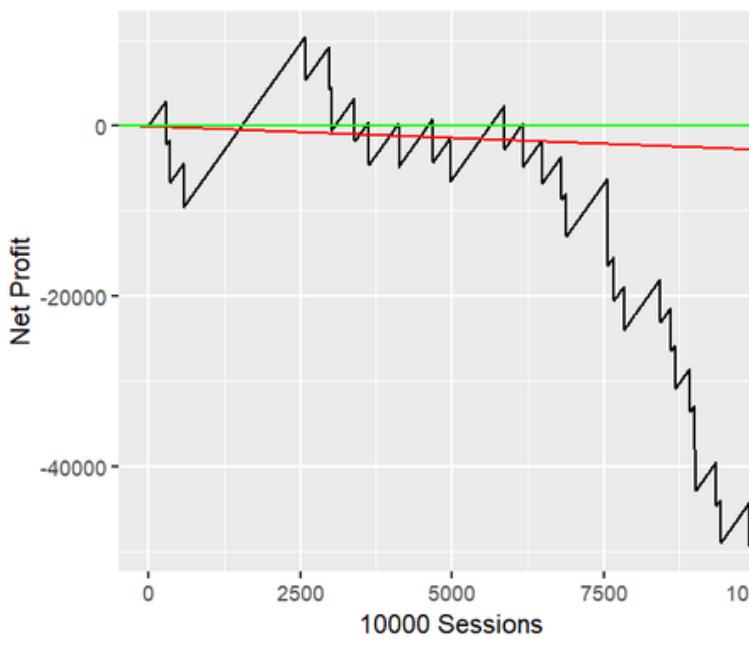

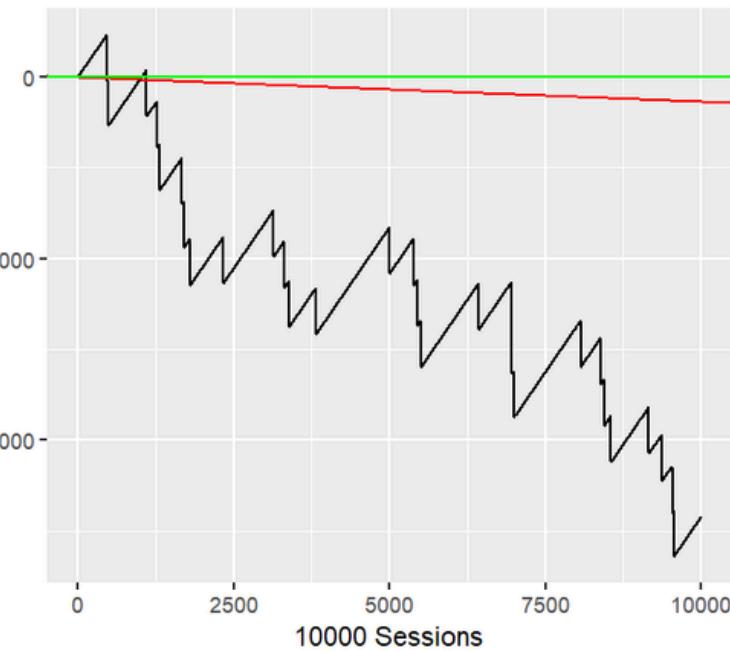

SIMULATION- 10000 Sessions
